## **Assignment 1(b)**

## **Question**

Find whether mixed partial derivative of second order are same or not.

$$f(x,y) = \sin(x)\cos(y)$$
 at  $\left(\frac{-\pi}{2}, \frac{\pi}{2}\right)$ 

## Code

```
syms x y;
   f1 = \sin(x) * \cos(y);
 3 p = diff(f1,x);
 q = diff(f1,y);
   p1 = diff(f1,x,x);
 6 q1 = diff(f1,v,v);
 7 p2 = diff(f1,y,x);
 8 q2 = diff(f1,x,y);
 9
    p_subs = subs(p,{x,y},{-pi/2,pi/2});
10 q_subs = subs(q,\{x,y\},\{-pi/2,pi/2\});
11
    p1\_subs = subs(p1, \{x,y\}, \{-pi/2, pi/2\});
12
    q1_subs = subs(q1,{x,y},{-pi/2,pi/2});
13
    p2\_subs = subs(p2, \{x,y\}, \{-pi/2, pi/2\});
14 q2_subs = subs(q2,{x,y},\{-pi/2,pi/2\});
15
    if(p2\_subs = q2\_subs)
16
        disp('Mixed partial derivative are same at
          (-pi/2,pi/2)');
17
    else
        disp('Mixed partial derivative are not same at
18
          (-pi/2,pi/2)');
19
    end
```

## Output

```
>> Assignment_1b
Mixed partial derivative are same at (-pi/2,pi/2)
>>
```
